## Capacity determination and factor calculation

### Capacity determination and total supply of pitches:

Number of pitches (for tourists)  
Number of long term pitches +  
Total number of available pitches:  
  
Number of available lavatories for rent

### Determination of the number of pitches to be taken into account and factor calculation

#### 1) Determination of pitches (for tourists) to be taken into account

- 1a) Total number of subdivided pitches (for tourists)  
Number of subdivided pitches (for tourists) without direct connections for water and waste water  
Number of subdivided pitches (for tourists) with direct connections for water and waste water  
50% of the pitches (for tourists) with direct connections for water and waste water are to be taken into account

**= Number of subdivided pitches (for tourists) to be taken into account**

1b) Number of non-subdivided pitches for tourists (especially campground)

Determination of the number of non-subdivided pitches (for tourists), as follows:

Non-subdivided gross area / 200 square meters = number of non-subdivided pitches (for tourists)

Number of non-subdivided pitches (for tourists), according to calculation above

Number of non-subdivided pitches (for tourists) without direct connections for water and waste water

./. 50% of the number of pitches (for tourists) with direct connection to water and waste water

**= Number of subdivided pitches (for tourists) to be taken into account**

**Sum of 1a and 1b) Total number of pitches (for tourists) to be taken into account**

**2) Determination of long-term pitches to be taken into account**

Number of long-term pitches

Number of long-term pitches without direct connections for water and waste water

2a) Number of long-term pitches with direct connections for water and waste water

./. 50% of the number of long-term pitches with direct connections for water and waste water

**= Number of long-term pitches to be taken into account I.**

2b) Number of long-term pitches without direct connections for water and waste water

./. 40% due to lower usage intensity

**= Number of long-term pitches to be taken into account II.**

**Sum of 2a and 2b) Total number of long-term pitches to be taken into account**

3)

**Taking available rental lavatories into account**

Total number of pitches (for tourists and long term pitches) to be taken into account:

./ . Number of rental lavatories

**= Number of pitches to be taken into account for factor calculation**
